New Product Info

E12HVM

The E12HVM, like the E12VM, is a vertical monitor. The horn sits above the speaker in the monitor position. This style is very popular with churches and many applications where the dispersion pattern needs to be wide. The monitor has a 12" woofer with a 2" voice coil and 40 oz. magnet. The high frequency is delivered through a 1" titanium diaphragm compression driver. This 8 ohm speaker has a power rating of 150 watts RMS and a sensitivity of 97dB SPL (1w/1m). The MDF cabinet is carpet covered, making a durable finish.
